Engagement for Sustainable Development

James O’Meara :james.omeara@nl.edu

- Professor of Curriculum and Instruction, NLU, Chicago
- President, International Council on Education for Teaching
- Director, World Literacy Council
- Chairman, Health Education and Promotion International
- Member, UNESCO NGO Liaison Committee
WHAT IS ENGAGEMENT? AN INSIGHT FROM NESSE

• Engagement represents two critical features of quality. The first is **the amount of time and effort** put into **educationally purposeful activities that lead to transformation**. The second is **how the catalytic communities deploy resources and organizes opportunities** to get local stakeholders to participate in activities that **research studies show are linked to effective campaigns for change**.

• adapted from http://nsse.iub.edu/html/about.cfm
CATALYTIC COMMUNITIES

• Engage in an interactive process involving that leads to a change
• Three unique attributes
  – they accelerate the rate of the change process.
  – they are not consumed by the interaction
  – only small amounts of the catalyst agent are required to achieve the change.
E3: Transformational i.e. Engagement for Sustainable Development
