Below are a few of the software or database systems worth considering in developing the databases for ICT indicators:

- Spreadsheet programmes, such as IBM Lotus 123 and MS Excel
- Statistical programmes, such as Statistical Package for the Social Sciences (SPSS)
- Customized database programmes using MS Access (for small databases)
- SQL Server, MAGIC (for big databases)

For data-based driven web applications (Visual Interdev, Java, Visual Basic), there is another software available in the market which can be used to create the ICT databases. Technical staff will be able to assist in determining the most feasible and user-friendly software adequate to answer specific needs.
